

**Table 1.5 Interpretation of vancomycin susceptibility for staphylococci**

|                                  | Vancomycin MIC ( $\mu\text{g}/\text{mL}$ ) |              |           |
|----------------------------------|--|--------------|-----------|
|                                  | Susceptible                                | Intermediate | Resistant |
| <i>Staphylococcus aureus</i>     |  |              |           |
| EUCAST 2017                      | $\leq 2$                                   | none         | $> 2$     |
| CLSI 2017                        | $\leq 2$                                   | 4–8          | $\geq 16$ |
| Coagulase-negative staphylococci |  |              |           |
| EUCAST 2017                      | $\leq 4$                                   | none         | $> 4$     |
| CLSI 2017                        | $\leq 4$                                   | 8–16         | $\geq 32$ |
